

Member Guide

Everything the site offers, and a short walkthrough for each tool.

[Free Resources](#)[Member Tools](#)[Locate](#)[Case Files](#)

[START HERE](#)

What Skiplook is

Skiplook is a set of investigative tools built for skip tracers, collectors, process servers, and investigators — people who need to find someone, confirm who they are, and back it up with records.

The site is split in two. Some of it is open to anyone with no account at all. The rest comes with a membership.

What's free to everyone

Three tools, no account and no payment. Statewide criminal record links, a Google search builder, and a fast phone search. Share them with anyone.

What comes with a membership

Case file management, and **Locate**: one search page that brings back a full profile in about a second, then matches public records to your subject with AI. Alongside them: an AI report writer, a phone search, a web archive tool, a metadata reader, a username search, a FOIA contact directory, and programs you run on your own PC.

You do not need to read this front to back

Find the tool you want, read its few steps, and go.

Free Resources

No account. No payment. Open to anyone — including people you want to send to the site.

[FREE RESOURCE](#)

Criminal Records

Direct links to every state that allows a public statewide criminal record search, with the fee each one charges. Thirty-seven states are covered.

These are official state portals — state police, courts, and bureaus of investigation. Skiplook is not running the search; it is pointing you at the right place and telling you what it costs before you get there.

How to use it

- 1 **Find your state** in the table.
- 2 **Check the fee.** It ranges from \$3 in Texas to \$95 in New York.
- 3 **Click the link** and run the search on the state's own site.

Verify the fee before you pay

States change their fees and move their portals without warning. The amount listed is what it was when the page was last checked, not a guarantee.

If your state is not listed

Only states with statewide public access appear here. For the rest, you are looking at a FOIA request or a county-by-county search. The FOIA Contacts tool in the member section gives you the addresses to send those requests to.

Anyone can run these

Statewide public access means exactly that — no licence, no permissible purpose, no account.

FREE RESOURCE

Advanced Google Search

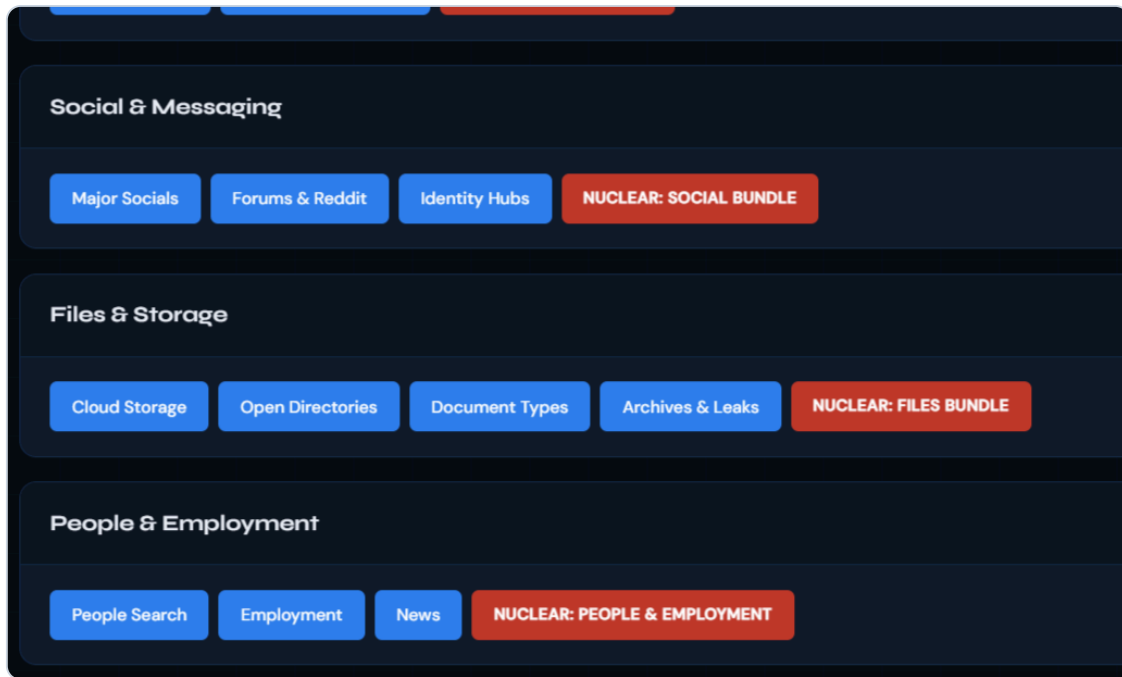

A builder for the kind of Google searches that actually surface people — the operators most searchers never learn. You fill in what you know, and it writes the search string for you.

The screenshot shows the 'Advanced Google Search Generator' tool. At the top, it says 'FREE TOOL - SEARCH'. The main title is 'Advanced Google Search Generator'. Below the title, it says 'Automate complex Google Dorks to surface records that are buried or hidden from standard search results. Built for investigators, skip tracers, and researchers.' There are three buttons: '4 Search Categories', 'Google Dorks Automated', and 'Nuclear Opens Multiple Tabs'. Below this is a section titled 'BUILD YOUR SEARCH'. It contains a 'How it works' section with three bullet points: 'Automatic Precision: Your Primary Term and Keywords are automatically wrapped in "" to force exact matches.', 'Logic Filtering: Use Include Keywords to force specific connections and Exclude Words to remove irrelevant noise.', and 'Nuclear Bundles: Opens each sub-search in its own tab simultaneously — no single truncated query.' Below this is a form with two input fields: 'PRIMARY TERM' with a placeholder 'Target name or unique identifier' and a help icon, and 'INCLUDE KEYWORDS' with a help icon.

Fill in what you know; the tool assembles the search.

Ready-made bundles

Below the builder are one-click bundles grouped by what you are hunting for — social and messaging, files and storage, people and employment, government and court records. Each fires a prepared search without you writing anything.

Bundles by category. The red buttons run every search in that group at once.

How to use it

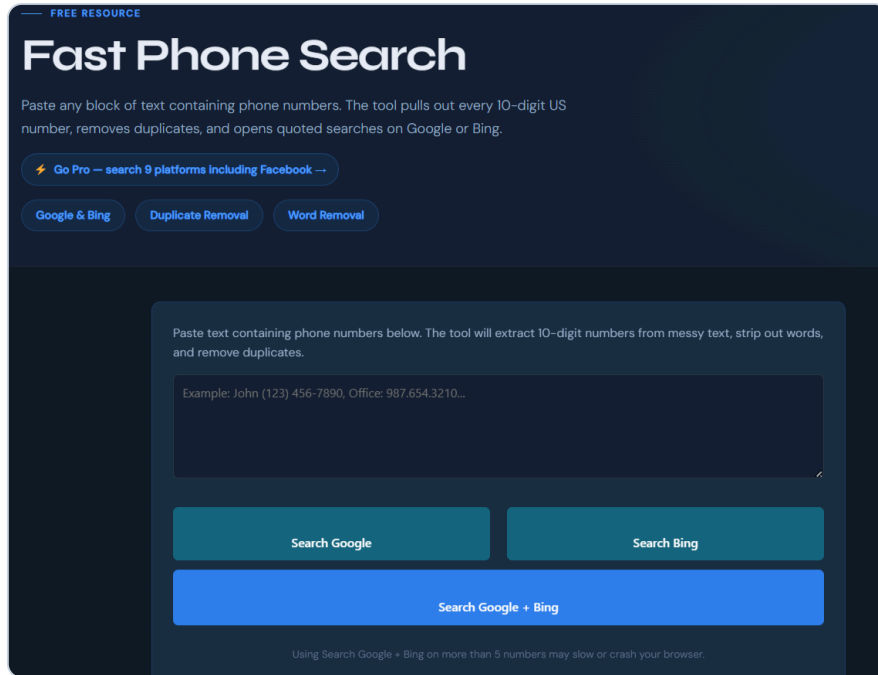

- 1 **Enter what you have** — a name, a username, a phone, an employer.
- 2 **Pick a category** that matches what you are trying to find.
- 3 **Click a bundle** to fire the searches, or copy the built string into Google yourself.

[FREE RESOURCE](#)

Fast Phone Search

Paste any block of text containing phone numbers. The tool pulls out every US ten-digit number, strips duplicates, and searches them.

Useful when you have a vendor report or a page of notes and you want every number in it checked without copying them out one at a time.

Paste text in, get searches out. The free version searches Google and Bing.

How to use it

- 1 **Paste your text** into the box. It does not need to be tidy.
- 2 **Let it extract the numbers** — duplicates are removed automatically.
- 3 **Search Google, Bing, or both.** Each number opens as its own quoted search.

Members get more

The Pro version in the member section searches nine platforms instead of two, and lets you control the number format. See [page — Fast Phone Search Pro](#).

Member Tools

Everything included with your membership, starting with Locate.

MEMBER TOOLS

Your membership

Both plans include every tool. The difference is how many search credits you get, how many case files you can keep, and how many AI reports you can run per day.

Standard

\$25 /month

- ✓ 75 credits, rolling 30 days
- ✓ 50 case files
- ✓ 1 Data Fusion report per day
- ✓ All other member tools

Premium

\$50 /month

- ✓ 150 credits, rolling 30 days
- ✓ 100 case files, plus employee seats
- ✓ 3 Data Fusion reports per day
- ✓ All other member tools

How credits work

Credits are spent on searches in Locate, and only when something is found. Employer Lookup and every other tool on the site use no credits.

You are only charged for results

A search that finds nothing costs nothing.

How credits refill

Credits run on a rolling thirty-day window rather than resetting on the first of the month. Each credit you spend becomes available again thirty days later, so your balance climbs back steadily instead of all at once.

Your remaining balance is shown at the top right of Locate and updates as soon as a search is charged.

MEMBER TOOL

Locate

Every search on one page. Pick a tab across the top, fill in what you know, and press Search. Each tab shows what it costs before you run it.

The tabs across the top. Your credit balance and the theme picker sit at the top right.

TAB	WHAT IT DOES	CREDITS
Premium Locate	The full profile, then public records matched to the person with AI.	2
Standard Locate	Public records only, matched against what you enter.	1
Reverse Phone	A number in — the person tied to it, with their full profile and matched records.	2
Business	Registrations, people tied to the business, federal awards, trucking and nonprofit records.	2
Property	An address or owner name in — property detail and the ownership chain out.	2
Workplace	A person in — employment records out.	2
Domain	A website in — registration and ownership contacts out.	1
Employer Lookup	Where a person works, or who works at a business, from donation filings.	0

Only charged when something is found

Every credit cost above is spent only on a result. An empty search costs nothing.

LOCATE · PREMIUM

Premium Locate

The search most people start with. Enter a name and anything else you know. The profile comes back in about a second.

Public Records matched to this person
All searches done

A profile: identity and other names, relatives and associates, address history, and phone numbers. All data shown is made up.

How to use it

- 1 **Enter a name** and any locating detail you have — a middle initial, date of birth, city, or state.
- 2 **Pick the right person** if more than one comes back. You can look at as many as you like; the search is already paid for.
- 3 **Read the profile**, then scroll down as the public records load underneath.

Everything is clickable

Click an email, phone number, address, relative or associate and it opens a Google search for it in a new tab, in quotes. The small pin beside an address opens Google Maps; the small phone icon beside a number starts a call. The magnifier beside a relative or associate puts their name into the search form, ready for a new search.

More detail in, fewer wrong matches

A middle initial, an age, or a former address will often turn several possible matches into one. Adding them costs nothing.

LOCATE · PUBLIC RECORDS

Public records, matched with AI

Underneath the profile, Locate searches public records in every state the person has lived in, plus national sources. It also searches under every other last name they have used, such as a maiden or married name. Each record is checked against the profile and given a match percentage and a one-line reason.

Records sorted into property, businesses, licenses, employment, political donations, Skiplook data and other records.

Reading a record

BADGE	WHAT IT MEANS
80% and up	Strong match — usually an address, phone or email ties the record to the person.
50 to 79%	Likely match — the name fits and something else lines up, like a city they lived in.
Under 50%	Probably someone else. These are folded away under “Show more”.

The italic line under each record says why it scored what it did. A tag reading **Found under** means the record turned up under one of their other last names.

Narrowing the list

The All, 50%+ and 80%+ buttons hide weaker matches. When everything has loaded, a line at the bottom tells you how many sources were checked, across which states, and how long it took.

Percentages are estimates

They come from comparing each record with the profile. Check anything before you rely on it.

LOCATE · STANDARD

Standard Locate

Public records only, with no premium profile. The records are matched against what you type in, so the more you enter, the better the matching.

Anytown MA 01000 example@domain.com

Search Clear

John Q Doe (MA)

Standard Locate. The public records below are matched against what you entered: 123 Example St Anytown, MA 01000, DOB 03/14/1974. The more you enter, the better the matching. Premium Locate gives a full profile to match against.

Businesses Nothing found
 No records found in the areas checked.

Employment & Payroll Nothing found
 No records found in the areas checked.

Standard Locate. The note at the top shows what the records are being matched against.

- 1 **Enter a first name, last name and state.** These are required.
- 2 **Add a street, city, phone, email or date of birth** — each one gives the matching something to check.
- 3 **Search.** It costs 1 credit, and only when a record matches.

All fifty states

Standard Locate covers public records in every state with no exclusions, including the four states premium searches leave out.

[LOCATE](#) · [MORE SEARCHES](#)

The other tabs

Reverse Phone

Enter a ten-digit number. If a person is tied to it, you get their full profile and their matched public records, exactly like Premium Locate.

Business

Enter a business name, and a city or state if you know them. You get its registrations and status, the officers and agents named on the record, people who list it as their employer, plus federal awards, trucking and nonprofit records where they exist.

Property

Enter an address, an owner name, or both. You get the property record — type, size, year built, assessed value and tax — plus current and previous owners with transfer dates.

Workplace

Enter a person and get employment records, including job title, work phones, work emails and linked professional profiles.

Domain

Enter a website address and get its registration contacts, with the date each record was created and last updated.

Saving a result

Business, property, workplace and domain results carry Copy Profile and Print / Save PDF buttons. Locate profiles have a print button in the blue bar.

Employer Lookup

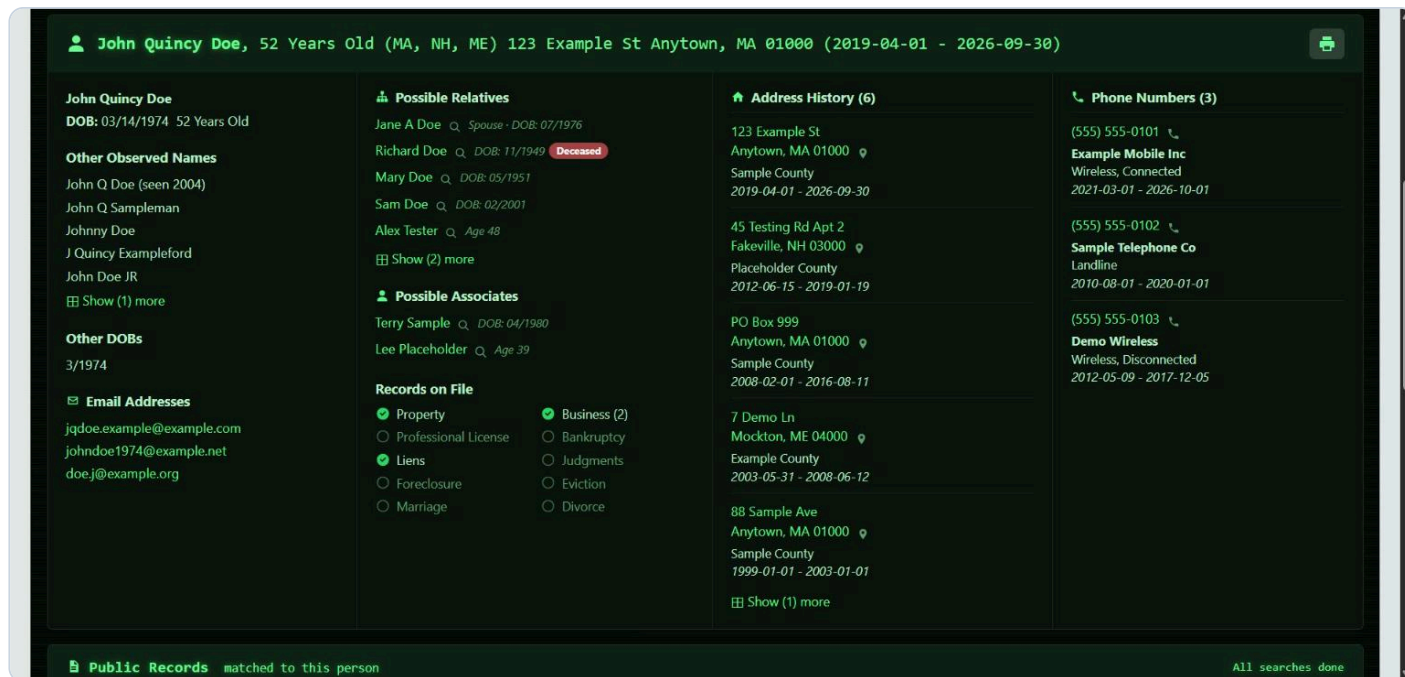

No credits. Choose **Look up a person** to see where someone said they work, or **Look up a business** to see who lists it as their employer. It reads political donation filings, where people report their own employer, so treat it as a lead rather than proof.

The screenshot shows the 'Skiplook Locate' web application interface. At the top, there's a navigation bar with the 'Skiplook Locate' logo on the left and a 'Theme' dropdown set to 'Skiplook' on the right, along with a credit balance of '61 / 75 credits left (rolling 30 days)'. Below the navigation bar is a row of buttons for different search types: 'Premium Locate 2 credits', 'Standard Locate 1 credit', 'Reverse Phone 2 cr', 'Business 2 cr', 'Property 2 cr', 'Workplace 2 cr', 'Domain 1 cr', and 'Employer Lookup no credit' (highlighted in orange). The 'Employer Lookup' section is active, showing a sub-header 'Employer Lookup' with a search icon. Below this, a message states 'Employer Lookup: no credits. From political donation filings: where a person said they work, or who lists a business as their employer.' There are two radio buttons: 'Look up a person' (selected) and 'Look up a business'. Below these are input fields for 'First Name' (containing 'John'), 'Last Name' (containing 'Doe'), and a 'State' dropdown menu (set to 'MA'). A 'Search' button and a 'Clear' button are at the bottom of the form. Below the search area, a results section titled 'Employer Lookup John Doe' displays two entries: 'Example Widgets LLC - Sales Anytown, MA - 2024-09-01' and 'Sample School District - Teacher Fakeville, NH - 2016-04-02'. A disclaimer at the bottom of the results section reads 'From political donation filings. People report their own employer there, so it may be out of date.'

Employer Lookup for a person. All data shown is made up.

Pick your look

The Theme menu at the top right changes the colors of Locate: Skiplook, Case File, Night Vision, Blueprint, Midnight and Graphite. Your choice is remembered the next time you log in.

The Night Vision theme.

LOCATE · IMPORTANT

Excluded states

Four states are excluded from premium searches that return information about people. This is a deliberate policy, not an error and not a gap in the data.

Premium people searches return nothing for current residents of:

CA TX OR VT

California · Texas · Oregon · Vermont

Premium Locate	Yes
Reverse Phone	Yes
Property	Yes
Workplace	Yes
Business	No
Domain	No
Standard Locate	No
Employer Lookup	No

What you will see

The search comes back empty, exactly like any search that finds nothing. Because you are only charged on a hit, **an excluded result costs no credits.**

An empty result is not proof of anything

Nothing back on a California subject does not mean no record exists. It means premium data for current residents of that state is not returned.

Historical addresses are fine

The exclusion is about where someone lives now. A subject who lived in Texas five years ago and lives in Ohio today returns normally, with the Texas address in their history.

Your workaround

Standard Locate has no exclusions and covers all fifty states. For a subject in those four, start there — it costs 1 credit, and only when a record matches.

MEMBER TOOL

Investigative Data Fusion

Not a search. This is what you use once the searching is done.

You paste in everything you have gathered — vendor reports, credit reports, social media, court records, your own notes — and it merges all of it into one written findings report.

Pick a **Report Type** at the top: General investigation, OSINT (emails, usernames, accounts and breaches), or Genealogy (family and a family tree). Each run counts as one report whichever type you pick.

MEMBER TOOL — AI POWERED

Investigative Data Fusion

Paste raw data from multiple sources. The tool extracts, cross-references, and scores every data point — giving you a structured findings summary ready for your report.

AI Cross-ReferenceMulti-Source FusionUnlimited Runs (Admin)

Your data is private. Skiplook does not store, view, or have access to any data you enter or any output this tool generates. All processing occurs between your browser and the AI. Nothing is logged or retained.

Important: All findings must be independently verified before being presented as fact. This tool processes only the data you provide — output accuracy depends on the quality of your inputs. Do not use this output as a final report without your own review.

CASE INFORMATION

FILE / CASE NUMBER (optional)
e.g. 2026-0089

CASE TYPE (optional)
e.g. Defendant Locate, Employment Verify, Missing Person

SUBJECT NAME
e.g. John Smith or Jane Doe-Williams

The tool will match this name even with minor variations — initials, nicknames, or slight spelling differences.

Case information. File number and case type are optional; case type shapes what the report flags.

Confirmed facts

Anything you enter here is treated as absolute truth. It will not be questioned, cross-checked, or flagged as a conflict, even where your sources disagree with it.

INVESTIGATOR-CONFIRMED FACTS (optional)

Warning: Anything entered here is treated as absolute ground truth and overrides all source data. Only enter facts you have personally confirmed. The AI will not question, cross-reference, or contradict anything in this box.

CONFIRMED FACTS

e.g. Subject does not live with ex-wife. Subject was confirmed at current address via surveillance on 04/20/2026.

DATA SOURCES

SOURCE 1

SOURCE LABEL
e.g. TLO / IDI - data vendor report, credit header, subject's Facebook, my notes - verified

SOURCE DATE (optional - when you pulled or recorded it)
e.g. 08/12/2026 or June 2026

PASTE SOURCE CONTENT
Paste the raw content from this source here...

Confirmed facts, then a box for each source.

Only put verified things here

This box overrides everything else in the report. Use it for what you personally confirmed — nothing else.

Adding your sources

Each source gets its own box, up to eight per run.

Up to 8 sources per run. **Describe each source accurately** — the tool weighs how much to trust it based on what you call it. Say what kind of source it is, not just where it came from: e.g. "TLO / IDI — data vendor report", "credit report", "credit header", "subject's Facebook", "court filing", "pictures / video — surveillance", "my notes — verified". Add the date you pulled or recorded a source if you know it. Leave the date blank and the tool will not treat that source as recent or use it to order the timeline.

Add a source, label it, date it, paste it. Then Process Sources.

Labelling matters

The label is how the report decides how much to trust what you pasted. Say what kind of source it is, not just where it came from.

Use the kind of source, not the brand name:

Data vendor report	Credit report
Social media	Surveillance
Investigator notes	Court filing

The date field

Fill it in and the report knows which of two disagreeing sources is newer. Leave it blank and that source is treated as unknown age — it will not be called recent and will not be used to order the timeline.

Steps

- 1 Enter the subject's name.
- 2 Add confirmed facts if you have any.
- 3 Paste each source into its own box and label it.
- 4 Process sources and wait.

- 5 **Edit before you keep it.** Use Edit Report to fix a line; copy and print pick up your changes.

What it will not claim

The report never calls something current or confirmed on vendor data alone. A credit-report employer reads as *listed*, because those dates are estimates. Only your confirmed facts make something verified.

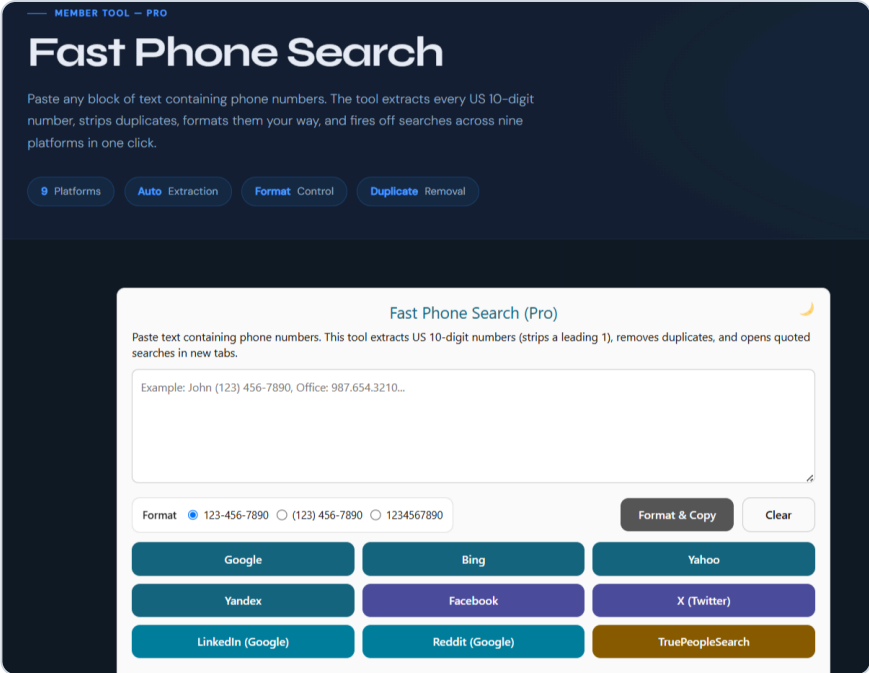

Daily limits

Basic gets one report a day, Premium gets three. Resets at midnight. A failed run does not count.

MEMBER TOOL

Fast Phone Search Pro

The member version of the free phone tool. Paste any block of text, and it extracts every US ten-digit number, strips a leading 1, removes duplicates, and fires searches across nine platforms at once.

The screenshot shows the 'Fast Phone Search Pro' web interface. At the top, it says 'MEMBER TOOL — PRO'. Below the title, there's a description: 'Paste any block of text containing phone numbers. The tool extracts every US 10-digit number, strips duplicates, formats them your way, and fires off searches across nine platforms in one click.' There are four buttons: '9 Platforms', 'Auto Extraction', 'Format Control', and 'Duplicate Removal'. The main area has a text input field with an example: 'Example: John (123) 456-7890, Office: 987.654.3210...'. Below the input, there's a 'Format' section with three radio buttons: '123-456-7890' (selected), '(123) 456-7890', and '1234567890'. To the right of the format buttons are 'Format & Copy' and 'Clear' buttons. At the bottom, there are nine buttons for different search platforms: Google, Bing, Yahoo, Yandex, Facebook, X (Twitter), LinkedIn (Google), Reddit (Google), and TruePeopleSearch.

Nine platforms, three number formats, and a format-and-copy button.

What it searches

Google, Bing, Yahoo, Yandex, Facebook, X, LinkedIn, Reddit, and TruePeopleSearch. Each number opens as its own quoted search in a new tab.

How to use it

- 1 **Paste your text.** A vendor report, notes, an email — anything.
- 2 **Pick your format** — dashes, brackets, or plain digits.
- 3 **Click a platform**, or use Format & Copy to take the cleaned list elsewhere.

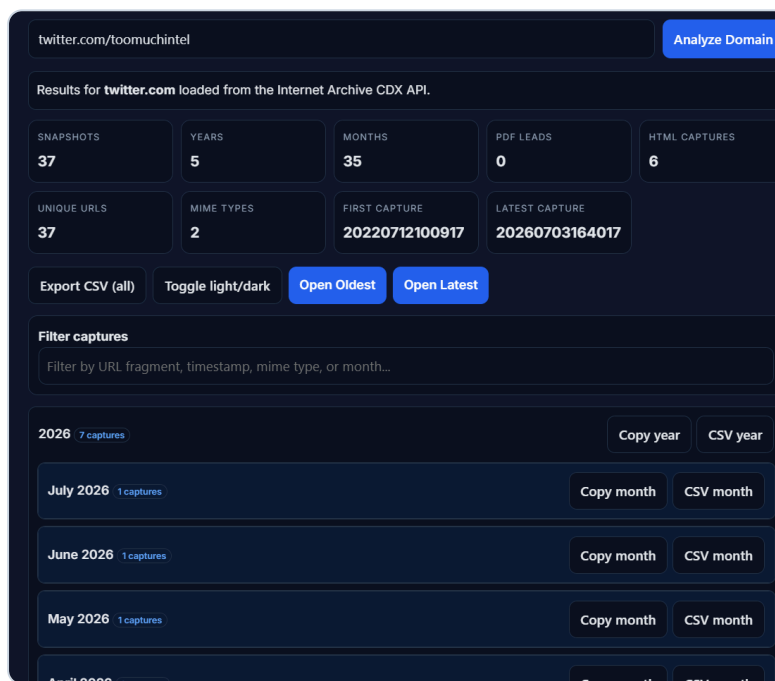

Allow pop-ups

The tool opens a tab per search. If nothing happens, your browser is blocking them — allow pop-ups for skiplook.com.

MEMBER TOOL

OSINT Archiver Pro

A front end for the Internet Archive. Enter a domain or a profile URL and it pulls every capture the archive holds, then lets you filter and export them.

Capture counts across the top, then everything grouped by year and month.

What you get

Total snapshots, how many years and months are covered, PDF and HTML capture counts, unique URLs, and the first and latest capture dates. Below that, every capture grouped by year and month.

How to use it

- 1 Enter a domain or profile URL and analyse it.
- 2 Read the summary to see how much history exists.
- 3 Filter by URL fragment, timestamp, or file type to narrow it.
- 4 Open oldest or latest, or export to CSV — all of it, one year, or one month.

Why it matters

A profile or business page that has been edited or taken down often still exists in the archive. This is how you find what a page used to say.

MEMBER TOOL

Metadata Inspector

Reads the hidden data inside images, PDFs, and Word documents — GPS coordinates, camera make and model, software fingerprints, author history, timestamps, and embedded thumbnails.

The screenshot shows the Metadata Inspector web application. At the top, the title "Metadata Inspector" is displayed in a large, bold font. Below the title, a subtitle reads: "Extract, analyze, and compare hidden metadata from images, PDFs, and Word documents — including GPS coordinates, software fingerprints, author history, and embedded thumbnails. Processed entirely in your browser." Below this, there are four buttons: "Images · PDF · DOCX", "GPS Detection", "Compare Two Files", and "100% In-Browser". A blue box contains the "How to use:" instructions: 1. Drag & drop or click **Choose File** to load an image, PDF, or .docx. 2. Optionally add a second file to compare them side by side. 3. Review the metadata, any hidden thumbnails, and GPS location data. 4. Blue rows in compare mode highlight differences between the two files. 5. Use **Export CSV** or **Export PDF** to save the report. Below the instructions, there are two file upload areas. The first is labeled "Primary File" and contains a "Choose File" button and the text "or drag & drop here" followed by the filename "20260812_141737.jpg". The second is labeled "Compare to (Optional)" and contains a "Choose File" button and the text "or drag & drop here" followed by the filename "20260812_135633.jpg". At the bottom, there are three buttons: "Export CSV", "Export PDF", and "Clear All".

Drop in one file, or two to compare them.

Nothing leaves your computer

Files are processed entirely in your browser. Nothing is uploaded.

Comparing two files

Load a second file and the two are shown side by side, with differences highlighted — useful for proving two photos came from the same phone, or that one was edited.

Two files side by side. Highlighted rows are where they differ.

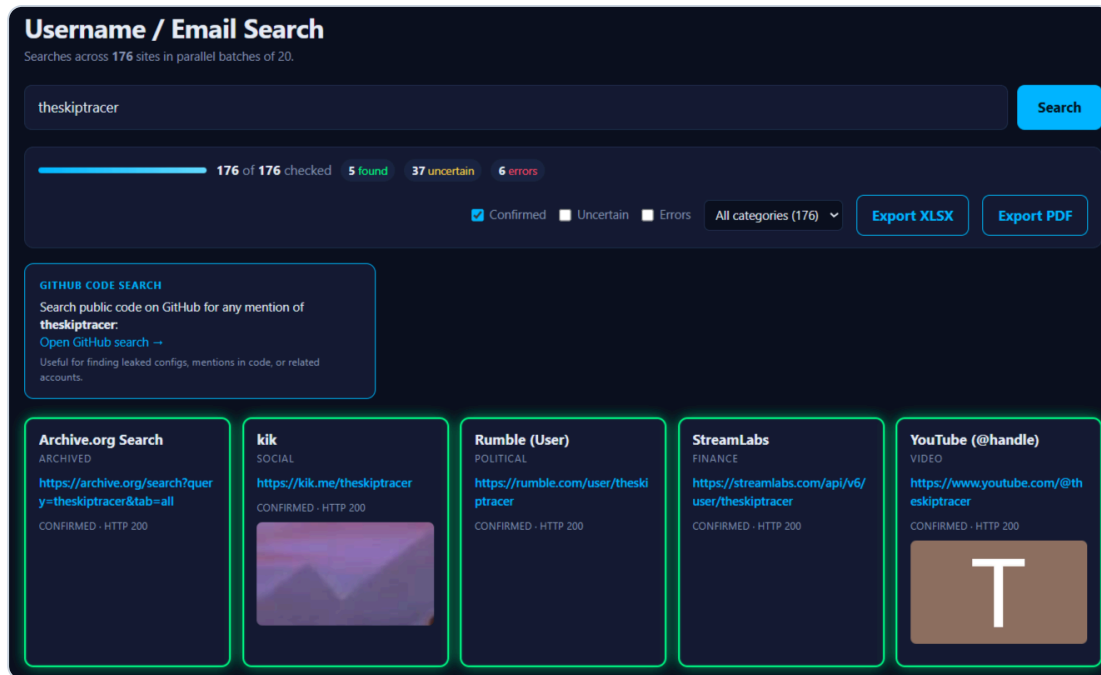

How to use it

- 1 Choose a file or drag it in.
- 2 Optionally add a second to compare.
- 3 Review the fields — check for GPS coordinates and camera model in particular.
- 4 Export CSV or PDF to keep it for your file.

MEMBER TOOL

Username / Email Search

Enter a username or an email address and it checks 176 sites for an account, running twenty at a time.

Results sorted into confirmed, uncertain, and errors, with a card for each hit.

Reading the results

Every result lands in one of three buckets. **Confirmed** means the site returned a real profile. **Uncertain** means the response was ambiguous and needs a human look. **Errors** means the site could not be reached — not that nothing is there.

Each confirmed hit shows the platform, its category, the direct URL, and a thumbnail where one exists.

How to use it

- 1 Enter a username or email.
- 2 Wait for the run to finish — the counter shows progress.
- 3 Check the uncertain ones yourself. Real accounts hide in there.
- 4 Export to XLSX or PDF for your file.

Also searches code

There is a GitHub code search link too — useful for finding a username mentioned in leaked configs or public repositories.

MEMBER TOOL

FOIA Contacts

A searchable directory of where to send records requests — police departments, sheriff offices, and government entities nationwide, with direct contact details. 146 entries, updated monthly.

— FREE RESOURCE

FOIA Contacts

Direct contact information for Freedom of Information Act requests across police departments, sheriff offices, and government entities nationwide. Use these contacts to request records directly.

148 Entries Nationwide Coverage Direct Contact Info

10

State	County	Town/Entity	Contact Information	Notes
Alabama	Geneva	Geneva Police	genevapolice@genevaal.gov	
Alaska				
Arizona	Maricopa	Chandler Town Hall	Rosemary.Rosales@chandleraz.gov	
Arkansas				
California	El Dorado	Placerville Police	ppdrecords@cityofplacerville.org	
California	Los Angeles	Santa Maria Police	pdrecords@cityofsantamaria.org	
California	Sacramento	Sacramento	CrimRecordsRequests@saccourt.ca.gov	

Sortable and searchable by state, county, and entity.

How to use it

- 1 **Search or sort** by state, county, or entity name.
- 2 **Take the contact address** from the row.
- 3 **Send your request** directly to that office.

Pairs with Criminal Records

Thirteen states have no statewide public criminal search. For those, this directory is how you reach the agency that holds the records.

MEMBER TOOLS

Also in your membership

Case Files

Your own case management system: case notes, a time and expense tracker, follow-ups, folders and search, with PDF and spreadsheet export. Each member sees only their own files. It has its own guide — the **Case Files Guide (PDF)**, linked on the home page and the Member Hub.

Member Downloads

Windows programs you install and run on your own PC, found on the Member Downloads page.

Clip Grabber	Save just the part of an online video you need, as an MP4, with a record of where and when you got it.
Transcriber	Turn a recording into a written transcript on your own PC. Nothing is uploaded.
Recorder	Record your screen as you scroll a profile or page, to preserve it before it changes or goes private.
Privacy Cleaner	Clear the traces that sensitive case work leaves on your PC once the work is done. You pick what goes.

SECTION 3

Common questions

A search found nothing. Was I charged?

No. Credits are only spent when something is found.

Why did a California subject come back empty?

Premium people searches are not available for current residents of California, Texas, Oregon, or Vermont. Use Standard Locate instead — it has no exclusions.

When do my credits come back?

Each credit returns thirty days after the day you spent it, rather than everything resetting on a fixed date.

Which searches use credits?

The Locate tabs, except Employer Lookup. Every other tool on the site uses no credits.

What does the match percentage mean?

How likely the record is about your subject, with the reason underneath. 80% and up is strong, 50 to 79% is likely, and under 50% is probably someone else.

A record says “Found under” a different last name.

Locate also searches the other last names your subject has used, such as a maiden name. The tag shows which one found that record.

My Data Fusion report looks cut off.

Long reports have a length limit. If one is reached you will see an amber warning above the report. Split your sources across two runs.

Can I fix a mistake in a report?

Yes. Edit Report, make your changes, then Done Editing. Copy and Print pick up your edits.

Nothing happens when I click a phone platform.

Your browser is blocking pop-ups. Allow them for skiplook.com.

Which plan am I on?

Your credit balance says so: Standard is 75, Premium is 150. It is at the top right of Locate.

Using this responsibly

Everything here is a research tool. You are responsible for having a lawful reason to look someone up and for how you use what you find. Skiplook is not a consumer reporting agency, and results must not be used for credit, employment, insurance, housing, or tenant screening decisions.
